The segment may be repeated 2-10 times. In this example the segment is repeated 10 times. The N-terminal may comprise NH2 or a leader segment of 1-20 amino acids, the C-terminal comprises COOH or a tail segment of 1-20 amino acids. Between each segment is a first and second spacing segment of 1-20 amino acids. p(141-155) is a peptide obtained from apo E. See also AARILI107 and AARILI109
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polypeptide(s) copying apo-lipoprotein E induced cell differentiation - useful for treating hypercholestrolaemia, inhibiting ovarian androgen secretion and for prodn. of diagnostic

The invention useful in developmental biology and in elucidating cell signalling and in elucidating cell signalling and insections in higher eukaryoter the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              genes from Dinteractions

CC The present invention describes proteins and their tragments (1) curve.

CC by chromosome 2 of the human malarial parasite, plasmodium falciparum.

CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2)

CC vaccines against p. falciparum infection comprising (I) or (II).

CC (I) and (II) are useful for the development of vaccines against

CC p. falciparum infection. (I) and polyclonal antisera or a monoclonal

CC antibody raised to immunogens comprising the sequences of (I), are

CC useful in the detection of infection with p. falciparum. Furthermore,

CC (I) (especially when they are rifins or secreted or membrane proteins)

CC can aid the identification of drugs to treat or grevent p. falciparum

CC p. falciparum. Sequencing of the plasmodium chromosome 2 and the

CC subsequent identification of proteins encoded by it will help to expand

CC our understanding of parasite biology, a process hampered by the

CC complexity of the parasite biology, a process hampered by the

CC vaccine and drug development. Parasite resistance to drugs and mosquito

CC resistance to insecticides have led to a resurgence of malaria in many

CC parts of the world, and there is a pressing need for vaccines and new

CC drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352 represent nucleotide

                                                                                                                                                      The invention relates to a human kinesin motor protein (KinI-3), with microtubule depolymerisation activity, and the polymucleotide encoding it. The novel KinI-3 motor protein can be used to prepare compositions for the diagnosis, prevention or treatment of cellular proliferation disorders, cancers, hyperplasias, restenosis, vascular malfunctions, abnormal wound healing, cardiac hypertrophy, inflammatory and immune disorders (such as rheumatoid arthritis, gout, psoriasis and diabetic retinopathy) neurological disorders and disorders of vesicular transport. This sequence represents a human KinI-3 polypeptide fragment with
                                                                                                                                        retinopathy) neurological combines sequence represents a flanking vector sequences.
                                                                                                                                                                                                                                                                                                                              An novel isolated microtubule motor protein, KinI-3 used for preparing compositions for the diagnosis, prevention or treatment of diseases such as cancers, hyperplasias or restenosis -

                                                                                                                        The invention relates to a human kinesin motor protein (KinI-3), with microtubule depolymerisation activity, and the polymerisate encoding it. The novel KinI-3 motor protein can be used to prepare compositions for the diagnosis, prevention or treatment of cellular proliferation disorders, cancers, hyperplasias, restenosis, vascular malfunctions, abnormal wound healing, cardiac hypertrophy, inflammatory and immune disorders (such as rheumatoid arthritis, gout, psoriasis and diabetic retinopathy) neurological disorders and disorders restricted and disorders and disorders restricted arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a human kinesin motor protein (KinI-3), with microtubule depolymerisation activity, and the polymucleotide encoding it. The novel KinI-3 motor protein be used to prepare compositions for the diagnosis, prevention or treatment of cellular proliferation disorders, cancers, hyperplasias, restenosis, vascular malfunctions, abnormal wound healing, cardiac hypertrophy, inflammatory and immune disorders (such as rheumatoid arthritis, gout, psoriasis and diabetic retinopathy) neurological disorders and disorders of vesicular transport. This sequence represents the human KinI-3 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                AAU77185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
